Catalin Ionescu

Senior Software Engineer with 7+ years building production systems across startup, enterprise, and safety-critical domains. Frontend-heavy full-stack - comfortable owning features end-to-end with React/Next.js/TypeScript on the client and Node.js, NestJS, or Spring Boot on the server. Recent work includes scaling a multi-brand Next.js platform serving ~10 brands on shared architecture, migrating a legacy Polymer codebase to Stencil.js for Norwegian railway systems, and shipping a full e-commerce marketplace from zero to production in under 2 months. I gravitate toward pragmatic solutions, measurable impact, and reducing complexity rather than adding to it.

SKILLS

FRONTEND

shadcn/ui · Tailwind CSS · Stencil.js · Angular · Vue.js · Next.js · React · JavaScript · TypeScript

BACKEND

Microservices · REST APIs · Spring Boot (Java) · NestJS · Node.js

TESTING

React Testing Library · Cypress

Professional Experience

Software Developer

Oct 2024 — Present

The Workshop · Málaga, Spain

• Architected and scaled a multi-brand Next.js platform serving ~10 brands with shared theming, routing, and CMS-driven content - dramatically reduced new brand onboarding time via an internal cloning wizard that automates theme, config, and structure setup
• Improved application performance in a microservices environment through Varnish caching strategies and optimized data delivery patterns between frontend and backend services
• Built and maintained automated test suites with Jest and Playwright, increasing coverage and reducing regression risk across brand deployments
• Contributed to cross-service integrations within a distributed microservices architecture, improving data flow between frontend and backend systems
• Owned CI/CD pipelines using Bitbucket and Bamboo for reliable, continuous delivery across multiple brand environments
• Hackathon - 2nd place: designed and prototyped a web push notification system; later approved for potential production integration
• Active contributor to code reviews and architectural discussions, raising team-wide code quality standards

Software Developer

Mar 2020 — Jul 2024

Thales · Bucharest, Romania

• Delivered safety-critical features for the Norwegian railway industry, implementing vital commands and train route optimization logic used in production rail operations
• Led the migration from Polymer 2 to Stencil.js across the frontend codebase, modernizing component architecture while maintaining strict safety compliance requirements
• Maintained a Java/Spring Boot microservice handling core processing logic, designed to minimize frontend preprocessing and centralize business rules server-side
• Drove code refactoring initiatives focused on performance optimization and long-term maintainability in a legacy enterprise codebase
• Collaborated with Norwegian stakeholders, translating domain requirements into technical implementations

Software Developer

May 2019 — Mar 2020

MindCell Systems · Bucharest, Romania

• Led frontend development of a Smart Parking management platform using Angular, delivering core UI components and business logic
• Contributed to Oraroo, an HR platform built in React focused on time

Playwright Jest

DATABASES

MongoDB

LANGUAGES

English Fluent

Romanian Native

logging and report generation
• Worked across two concurrent projects, balancing delivery deadlines and context-switching between distinct product domains

Software Developer

Nov 2018 — May 2019

Doraly Marketplace · Bucharest, Romania

• Shipped a full-stack e-commerce marketplace from zero to production in under 2 months as part of a 3-person team
• Built the frontend with Vue.js/Vuex and the backend with NestJS/MongoDB, moving fluidly across the stack
• Established core development practices (testing, code review, deployment) from scratch in a fast-paced startup environment

Web Manager & QA

Mar 2017 — Nov 2018

IBM Romania · Bucharest, Romania

• Managed IBM Turkey's web presence (ibm.com/tr), transitioning from QA into a Web Manager role
• Built an automation tool aggregating data from 100,000+ web pages, eliminating manual GDPR compliance verification for marketing teams
• Transformed a repetitive compliance workflow into an automated pipeline, freeing up significant team capacity

Education

No Degree in Electrical Engineering

Oct 2014 —

University Polytechnic of Bucharest · Bucharest, Romania

Completed 3 years of Electrical Engineering, building a strong foundation in analytical problem-solving and applied mathematics. Developed programming skills in JavaScript and Java through coursework and self-directed learning. Made a deliberate decision to pursue software development full-time, entering the industry in 2017.

Bachelor's degree in Electrical

Sep 2010 — Jun 2014

Technological College Costin Nenitescu · Buzău, Romania
